Mateus Fabro

Data & Analytics Engineer

I build the pipeline and the product around it — Python · SQL · TypeScript · AI agents

Londrina, Brazil · remote · mateusrfabro@hotmail.com · github.com/mateusrfabro · LinkedIn · mateusfabro.vercel.app

SUMMARY

Data and analytics engineer: I design, build and run end-to-end data systems — pipelines, anti-fraud, media attribution, APIs and dashboards — and the product around the data, in Python and TypeScript.

Since Oct 2025 at Super Nova Gaming / MultiBet, in a four-person data squad serving three iGaming operations in three countries and three currencies.

Outside work, I built and run my own products, one of them with a real customer in production, covered by tests and with an honest status — including the ones that stopped.

IN NUMBERS

125	1,734	6,357	3	3.07 bn
lessons on record from real cases	of my commits in 2026, across 8 own products	test functions in the 4 Python products	iGaming operations, in 3 countries and 3 currencies	records in the data lake I migrated

EXPERIENCE

Super Nova Gaming / MultiBet (PGX Group)

Oct 2025 – present · remote

Data Analyst

Four-person data squad serving three iGaming operations (Brazil/BRL, Pakistan/PKR, Colombia/COP). Main deliveries at Play4Tune and Play4 Colômbia: multi-tenant analytics, risk service, media cost in the attribution tracker and dashboards; at MultiBet, pipelines and the consumer layer of the data lake migration.

Data engineering and platform

- Built the consumer layer of the data lake migration (legacy Athena → S3 Tables/Iceberg, 234 tables, 3.07 bn records): a dual-environment connection layer with a single source and one-variable rollback, without breaking the consumer pipelines.
- Did the multi-tenant retrofit of the analytics (two operations on the same tables): typed tenant registry, mandatory scope in the query runner and a fail-closed linter with an allowlist ratchet (43 → 3 exceptions) plus an editor hook — born from a real currency-scope incident.
- Built the gold layer for tournaments, joining three sources (PostgreSQL, MongoDB Atlas, postgres_fdw) under one contract, fail-closed: a source that is down becomes UNREACHABLE, never a false zero.
- Standardized git-first deployment on EC2 (AWS SSM, remote smoke tests, systemd timers).
- Optimized the critical query from 240 s (timeout) to 21 s, with set-based equivalence proof.

Systems and applications

- Extended and operated the multi-tenant attribution tracker (NestJS 11 + Next.js 15): conversion postbacks, dispatch to the channels' conversion APIs and cost joined with revenue → CAC, ROAS and LTV per campaign and creative.
- Built the admin/auth module from scratch (opaque sessions with hashed tokens, guards, audit log) and the whole media-cost layer — Meta Graph API multi-BM, Google Ads and TikTok, 6 cron jobs — replacing a paid vendor.
- Dashboards and web services in production: Flask (bonus center, CRM), Dash/Plotly with Docker, FastAPI, and an operational alert mesh on WhatsApp (self-hosted Evolution API), Slack and Telegram with data-freshness silence alarms (dead-man's switch).

Anti-fraud and ML

- Built the daily risk service for the Pakistan operation: 5 detectors (wallet cluster, bonus → withdrawal, referral ring, e-mail burst, withdrawal retention), delta against a snapshot and an HTML + Telegram digest.
- Built the PCR — a player credit score in tiers over a rolling 90-day window, published atomically to the CRM while preserving the risk tags.
- First-name gender inference with a dictionary trained on the company's own base: 99.45% accuracy on a 70/30 holdout, auditable funnel starting from the whole base (1.38 M players).

Applied AI

- Assembled a squad of 25 Claude Code agents with defined roles (10 from the data squad + 15 general) and 5 skills of my own (tenant scope, multi-currency, memory promotion, PRD and page factory), with a mandatory gate (extraction → best practices → audit → delivery) and hooks that block destructive git and commits without tests.

- I keep a three-layer memory (project → global → export): 125 recorded lessons, each with origin, reason and how to apply it, and a script that proves the index forgot none.
- Anthropic API in production in two products (multimodal AI in DumpAI; clinical chatbot in Nous Clinical), a LangChain/n8n agent in the WhatsApp secretary and a local lab (Ollama + PyTorch on an RTX 4060) to learn what runs without an API.

Costa Oeste / Terceirize

Jul 2025 – Sep 2025 · Londrina, Brazil

Administrative Analyst

- Operational KPIs and Power BI dashboards; administrative data governance routines.

ADAMA

Oct 2020 – Sep 2024 · Londrina, Brazil · internship in 2019–2020

Credit & Collections Assistant

- Accounts receivable and FIDC operations; corporate and retail credit analysis with collateral.
- Power BI dashboards for the Brazil and Global teams; worked on the Credit Portal.

OWN PRODUCTS

Avisa Edital — Alerts for job calls, appointments and public exam notices for physicians in Paraná and São Paulo, on WhatsApp or Telegram, filtered by specialty and region. *(Live since August 2026; daily operation since October)* · avisaedital.com.br

Pingado — Café management: counter sales in three taps, tabs, store credit, stock and the month's results. *(In production since September 2026; active monthly plan, two stores)*

Nous Clinical — Clinic management: scheduling, medical records, exams, finance and patient follow-ups. *(Last product version on 10/06/2026; repository maintenance only since)*

Aggron — Group buying for burger restaurants: orders pooled into rounds and suppliers bidding for the lot. *(Complete MVP; paused since 05/28/2026 (repository maintenance only since))*

DumpAI — AI picks the best 10 of 30 photos for an Instagram photo dump. *(Live; low revenue)* · dumpai-omega.vercel.app

WhatsApp Receptionist — A WhatsApp receptionist with a real calendar for self-employed professionals. *(Pilot paused (Google authorization))*

Credit SaaS (under NDA) — Multi-tenant credit management: a staff panel and a customer portal as a PWA. *(Pilot live since October 2026)*

Content portals fed by official data — Five static portals on finance and labor rights, with indicators that refresh themselves from official sources. *(Live since October 2026; monetization under evaluation)* · radardoinvestidor.com.br

STACK

Languages	Python (pandas, SQLAlchemy, boto3, psycopg2, pytest) · TypeScript (NestJS, Next.js, React, Prisma, Jest) · advanced SQL (PostgreSQL 15, Trino/Athena) · Bash · PowerShell
Data and cloud	AWS (Athena, S3 Tables/Iceberg, EC2, RDS, SSM, IAM) · PostgreSQL (partitioning, FDW, matviews) · MongoDB Atlas · Redis · Supabase · Prefect 3 · systemd
Backend and web	Flask · FastAPI · NestJS 11 · Next.js 15/16 + React 19 · Astro 7 · Tailwind · Docker/Compose · nginx/Caddy · Vercel · Render
Integrations	Meta Marketing/Graph API · Google Ads · TikTok Ads · Smartico CRM · WhatsApp (Cloud API + Evolution) · Telegram · Slack · Google Calendar · Kiwify · Focus NFe · Central Bank and FRED APIs
Applied AI	Claude Code (agent squads, skills, hooks, layered memory) · Anthropic API (multimodal, in production) · LangChain/n8n · Ollama + PyTorch (QLoRA)
Security and practices	Argon2 · 2FA/TOTP · CSP · CSRF · rate limiting · per-tenant RLS · opaque sessions · audit logs · LGPD/PII · git-first + smoke tests · tests as deploy gate · fail-closed by default · backup restored in CI

EDUCATION

Business Administration — Universidade Anhembi Morumbi · 2022–2025 (completed)

Accounting — Universidade Estadual de Londrina (UEL) · 2018–2021 (incomplete)
